

Northeast Nebraska Placement Guide

Primary Hybrids

Hybrid	Maturity	% of Acres	Placement	Harvest Timing
5732 GT/CB/LL	107 RM	up to 15%	New, combines reliable agronomics with high yields. Use irrigated or dryland. Good ear flex, plant height, and above average tolerance to Goss' wilt. Liberty tolerance provides another herbicide option.	Mid-Late Harvest
5845 G2Pro	108 RM	up to 15%	New, delivers top yields on high producing fields. Use irrigated or on less drought prone dryland. Prefers well drained fields and not ideal for stress prone irrigated sand.	Mid Harvest
5909 G2Pro	109 RM	up to 20%	Yield Leader in this maturity. Great ear flex and moderate plant size. Best irrigated to utilize yield potential but has good ear flex for dryland. Flexible on soil types and good tolerance to Goss' wilt.	Early Harvest
5924 G2Pro & Conventional	109 RM	up to 20%	Great yield potential with larger plant size good for terraced and hilly fields. Consistent top performer on typical northeast Nebraska clay loam hills. Use irrigated or dryland.	Early-Mid Harvest
5940 VT3Pro, G2Pro, RR2, Conventional	109 RM	up to 25%	Reliable performer for this maturity. Good plant height for terraces and excellent canopy. Flexible across soil types including really good on high pH and saturated soils.	Mid Harvest
6022 GSS & G2Pro	110 RM	up to 25%	Defensive hybrid with high yield potential. Use dryland or irrigated. Good on Goss' and other diseases except for GLS. Lead choice on drought prone fields. Really good on saturated and high pH. Likes to be planted at higher populations.	Mid-Late Harvest
6149 G2Pro	111 RM	up to 15%	New Defensive hybrid addition with top dryland yields. Strong choice for fields with drought prone and high yield areas. Can be planted thinner due to excellent ear flex. Showed good tolerance to saturated fields.	Mid Harvest
6208 GSS, G2Pro, RR2 & Conventional	112 RM	up to 20%	Tried and true leader for northeast Nebraska. Shows largest advantage on tighter clays and tough soil that other hybrids struggle in but still good top end yield potential. Solid standability allows for mid to later harvest.	Mid-Late Harvest
6324 DG2Pro	113 RM	up to 15%	Top yields for high performance fields. Best in moderate or thicker populations. Excels in highly managed fields with ample fertility and fungicide applications.	Early-Mid Harvest
6327 G2Pro	113 RM	up to 25%	Customer favorite. Tough hybrid for more drought prone soils while still having high yield potential. Excellent on Goss'. Average harvest integrity compared to most Seitec hybrids.	Mid-Harvest
6334 G2Pro, & Conventional	113 RM	up to 20%	Great standability, place in fields that will more likely be late harvest. This hybrid likes high fertility fields where it can bring yield with ear flex. In lower fertility fields it may take away some yield to maintain plant health so avoid low fertility fields.	Late Harvest
6381 G2Pro & Conventional	113 RM	up to 15%	New hybrid with great yield potential. Place on Irrigated and higher yield potential dryland. Really good heat tolerance. Performed well on high pH and saturated soils.	Mid-Late Harvest
6433 G2Pro	114 RM	up to 25%	Customer favorite with the highest yield potential. Excels in high yield irrigated but also use on less drought prone dryland. Delivers balanced agronomics, good ear flex, and standability.	Mid-Late Harvest
6478 GSS & G2Pro	114 RM	up to 20%	Best yielding mid-maturity SmartStax. High performer in plentiful moisture and fertility but also showed exceptional performance moving into more stressed fields. Performs well on saturated soils.	Mid Harvest
6486 3000GT, 3120, & Conventional	114 RM	up to 25%	Solid, workhorse hybrid delivering reliable yields. Lead hybrid on for corn on corn dryland. Good plant size to use in the hills on high performance and stress prone fields.	Late Harvest
